

PRESS RELEASE

ShareCG.com Partners with Altadyn's 3DXplorer to Create the First Virtual-World Development Platform and Content Library

Benefits both content providers and users

April 25, 2008 Campbell California – ShareCG.com and Altadyn have teamed up to provide game developers, graphic artists, and animation enthusiasts with the tools to create and display their own 3D worlds on the Web.

Users Visit 3DXplorer.com to get the tools they use to create and populate their own virtual worlds then, during the building process, they grab user contributed 3D models, art work, textures, and materials from ShareCG's thousands of library selects.

Once a customized 3D world is completed it is quickly transferred to ShareCG where it is walked-through, explored and then rated and commented on by hundreds-of-thousands of visitors; many of whom have started building and displaying their creations and actively participating in ShareCG's community.

The underlying technology powering 3DXplorer is Sun's Java™. Java™ makes the entire process, from design to creation to display entirely OS independent, working on any web browser on any computer. The Altadyn people built an intuitive GUI that walks you through creating and managing your projects all the way to publishing. Creating a scene, decorating it, populating it with 3D objects and setting your camera is a "wysiwyg" experience.

David Heller, president of IBSystems, parent company of ShareCG.com said, "I played with this product and got totally engaged and drawn in. I felt that the computer artists and animators who visit ShareCG daily would enjoy creating their own virtual worlds, and would benefit from a web-native 3D immersive viewer to visualize each others creations."

Commenting the partnership with ShareCG.com, Darius Lahoutifard, Altadyn's CEO declared: "ShareCG's fast growing community is a valuable source of content for all 3DXplorer users who can build unique Virtual Worlds and 3D websites by incorporating a variety of creative 3D models as well as other computer graphics elements available on ShareCG.com"

Users just have to visit www.ShareCG.com to create their own VR worlds, critique others, and benefit from this ground breaking technology.

About Altadyn

Altadyn is a developer of real-time web3D software that delivers high end technology to everyone's desk. With 3DXplorer -- its web 3D development platform -- and Toon-MX -- a 3D "digital puppetry" software -- the company has focused its efforts on adding a new dimension to the online experience. Altadyn is already delivering value to major customers including SAP, Orange, Bayer, and Glaxo-Smith-Kline. Altadyn has offices in Paris, France and Irvine, California.
